

### RoHS HF **SM20 Varistor Series**

#### Description

The Littelfuse 20mm SMD Series is a surface-mount metal oxide varistor device, for use in applications requiring hi-energy / transient current capability.

The AC rated parts are designed to operate continuously across AC power lines. The DC rated parts are suitable for Automotive applications. The series comprises a Nylon molded package with folded tin plated metal leads for soldering to board.

The SMD Series is based on radial 20mm internal varistor element with similar characteristics to the Littelfuse LA / ZA series of varistors.

#### Agency Approvals

| Agency  | Agency File Number |
|---|--------------------|
|  | E320116            |

#### Features

- DC Voltage Rating 26VDC
- AC Voltage Rating 175 - 320AC
- No De-Rating up to 85°C ambient
- Lead-Free, Halogen-Free and RoHS Compliant
- Low voltage devices specified for automotive load dump energy
- Available in "waffle" tray packaging

#### Absolute Maximum Ratings

• For ratings of individual members of a series, see Device Ratings and Specifications chart

| Continuous   | SM20 Series | Units      |
|--|-------------|------------|
| <b>Steady State Applied Voltage:</b>   |             |            |
| AC Voltage Range ( $V_{M(AC)RMS}$ )  | 20 to 320   | V          |
| DC Voltage Range ( $V_{M(DC)}$ )   | 26          | V          |
| <b>Transients:</b>   |             |            |
| Peak Pulse Current ( $I_{TM}$ ) 8/20 $\mu$ s Current Wave, Single Pulse  | up to 6500  | A          |
| Single Pulse Energy Capability ( $W_{TM}$ ) 10/1000 $\mu$ s Current Wave   | 165         | J          |
| Load Dump Energy Capability ( $t_d \geq 30ms$ )  | 160         | J          |
| Operating Ambient Temperature Range ( $T_A$ )  | -40 to +85  | °C         |
| Storage Temperature Range ( $T_{STG}$ )  | -55 to +125 | °C         |
| Temperature Coefficient ( $\alpha$ ) of Clamping Voltage ( $V_C$ ) at Specified Test Current   | <0.01       | %/°C       |
| Hi-Pot Encapsulation (COATING Isolation Voltage Capability)<br>(Dielectric must withstand indicated DC voltage for one minute per MIL-STD 202, Method 301) | 2500        | V          |
| COATING Insulation Resistance  | 1000        | M $\Omega$ |

**CAUTION:** Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

### SM20 Series Ratings & Specifications

1. Energy rating for impulse duration of 30ms minimum to one half of peak current (automotive load dump).

### Peak Current, Energy and Power Derating Curve

For applications exceeding 85°C ambient temperature, the peak surge current and energy ratings must be reduced as shown below

### Repetitive Surge Capability

V175SM20 - V320SM20

### Peak Pulse Current Test Waveform for Clamping Voltage

O<sub>1</sub> = Virtual Origin of Wave

T = Time from 10% to 90% of Peak

T<sub>1</sub> = Rise Time = 1.25 x T

T<sub>2</sub> = Decay Time

**Example** - For an 8/20  $\mu$ s Current Waveform:

8  $\mu$ s = T<sub>1</sub> = Rise Time

20  $\mu$ s = T<sub>2</sub> = Decay Time

### Lead (Pb) Soldering Recommendations

The principal techniques used for the soldering of components in surface mount technology are IR Re-flow and Wave soldering. Typical profiles are shown on the right.

The terminals of SM20 series devices are tin plated copper, and the recommended solder is 62/36/2 (Sn/Pb/Ag), 60/40 (Sn/Pb) or 63/37 (Sn/Pb). Littelfuse also recommends an RMA solder flux.

Wave soldering is the most strenuous of the processes. To avoid the possibility of generating stresses due to thermal shock, a preheat stage in the soldering process is recommended, and the peak temperature of the solder process should be rigidly controlled.

When using a reflow process, care should be taken to ensure that the SM20 chip is not subjected to a thermal gradient steeper than 4 degrees per second; the ideal gradient being 2 degrees per second. During the soldering process, preheating to within 100 degrees of the solder's peak temperature is essential to minimize thermal shock.

Once the soldering process has been completed, it is still necessary to ensure that any further thermal shocks are avoided. One possible cause of thermal shock is hot printed circuit boards being removed from the solder process and subjected to cleaning solvents at room temperature. The boards must be allowed to cool gradually to less than 50°C before cleaning.

### Reflow Solder Profile

### Wave Solder Profile

### Lead-free (Pb-free) Soldering Recommendations

The terminals of SM20 series devices are tin plated copper, and the recommended Lead-free solder is 96.5/3.0/0.5 (SnAgCu) with an RMA flux, though there is a wide selection of pastes and fluxes available that should be compatible.

The reflow profile must be constrained by the maximums in the Lead-free Reflow Profile. For Lead-free Wave soldering, the Wave Solder Profile still applies.

Note: the Lead-free paste, flux and profile were used for evaluation purposes by Littelfuse, based upon industry standards and practices. There are multiple choices of all three available, it is advised that the customer explores the optimum combination for their process as processes vary considerably from site to site.

### Lead-free Re-flow Solder Profile

### Product Dimensions

| Symbol                 | Millimeters |      |
|------------------------|-------------|------|
|                        | Min         | Max  |
| <b>D</b><br>(diameter) | ---         | 26   |
| <b>H1</b>              | ---         | 10.5 |
| <b>H2</b>              | 1.0         | —    |
